Sustainable Development & Energy Systems Group, LLC

Leading the Energy Revolution

Commitment to Excellence

Our dedication to providing quality service and fostering long term relationships with our clients is a cornerstone to our business. Our objective is to provide comprehensive solutions to set your facilities and practices on a path toward a more sustainable future.

The Current Energy Crisis

Energy security, efficiency and reliability are now, more than ever, critical issues throughout the Northeast and the nation. A dramatic realization has occurred for many people as a result of skyrocketing energy costs, the impacts of climate change, and energy instability that we must transform our energy infrastructure.

The time is now to confront these concerns head-on and transform these challenges into opportunities.

SDES Group's Mission

The mission of Sustainable Development & Energy Systems Group (SDES) is to lead the energy revolution by helping clients research and develop their own solutions for providing adaptive and innovative systems. We support the creation of results that are responsive and systems-based for residential, commercial, industrial, and institutional energy users looking to reduce energy use, reduce costs through energy efficiency and minimize their environmental impacts. We provide a full range of planning and solution development services and enable energy users to take advantage of practical and innovative technologies to implement alternative approaches to these goals. We accomplish this through a collaborative planning and engaged process that finds ways to reduce energy use and increase energy efficiency where possible. Our collaborative approach engages all stakeholders in developing a solution that is both realistic and successful. We focus on increasing building performance, lowering energy costs, and improving power reliability by selecting, installing, and maintaining energy systems and construction practices that reflect project goals.

SDES Clients

SDES provides robust services to a broad-based clientele, including:

- Individual Homeowners
- Hotels and Resorts
- Commercial Facilities
- Schools and Colleges
- Municipalities

Our clients seek to develop and implement solutions that lower energy use and provide long-term reliability while reducing their carbon footprint. Many of our clients are typically dissatisfied with their current energy systems and are seeking to explore alternative energy opportunities.

Services

We provide a suite of services for our client

- Identify client goals
- Project option development, selection and management
- Installation of integrated, alternative energy systems
- Envelope efficiency and operating management upgrades
- Evaluation of incentive and rebate opportunities
- Development and management of publicity and media outreach

We offer our clients a solution-based (not technology or product-based) option by developing and evaluating your goals.
